

## For four-sided bleed sheets from two-up printing

Gutter cut option for the Lasermix Roll Systems RS Stack system creates side-to-side bleed sheets by removing a running strip from the center of a web. When combined with strip cut option, gutter cut creates four-sided full bleed sheets from a two-up printed web. Off-line guillotining is eliminated, improving productivity.

The gutter cut option is mounted on Lasermix Roll's RSC7 precision guillotine cutter and accurately removes one-quarter inch of material from the center of the web. This is accomplished with a double slitting blade. The quarter inch strip is chopped and directed to the cutter's waste bucket. Gutter cut is easily engaged and disengaged without tools.

Gutter cut is not compatible with certain other RS Stack options. For more information about the gutter cut option, please contact your Lasermix Roll Systems representative.

### Specifications

Cut Width: 1/4" (6.3mm)

For printers operating at over 250 feet per minute, consult your Lasermix Roll Systems representative.
