**2/4-Hole**

Hole diameter: 5 mm or 5.5 mm  
Hole spacing: 80 mm center-to-center  
Hole pattern: 10 mm from edge of paper

The Lasermix Roll Systems DocuSheeter™ hole punch options are ideal for applications that require a standard U.S. 3-hole punch or A4 2/4-hole punch, such as manuals, reports, and loose-leaf binders.

The hole punch options are comprised of electronically driven precision punch and die sets housed in steel blocks.

Mounted on the DocuSheeter cutter module, the hole punch options deliver punched sheets. The operator turns the punching function on or off with the push of a button, and no adjustments are required. The options can be field installed and are easily serviced.

Significant benefits of the hole punch option include:

- Saves cost of buying pre-punched paper
- Allows use of common paper stock, decreasing inventory and increasing operator efficiency
- No hole plugs, drill dust, or interlocking holes to jam or damage your printer
- Increases reliability with single sheet feed

Lasermix Roll Systems provides other hole punch configurations on a special request basis – consult your representative.
