

## Precise forms from pre-printed rolls

Customers wishing to utilize pre-printed rolls for checks, statements, and other applications on a DocuSheeter™ will require the print registration option. This option enables sheeting of pre-printed forms, generating significant paper savings.

The Lasermix Roll Systems print register option is comprised of an optical sensor mounted on the DocuSheeter cutter, to read a standard optical mark printed on the roll.

In addition to following the mark guidelines, Lasermix Roll Systems also strongly recommends:

- The forms converter confers with Lasermix Roll customer service prior to pre-printing a form the first time. Equipment configuration should be accounted for and a drawing or sample form should be compared to mark guidelines.
- A minimum quantity of test rolls be procured prior to high volume procurement.
- Prior to installation of a DocuSheeter with print register, Lasermix Roll requires a 5000-form (minimum) roll of pre-printed material for test at our facility in Burlington, MA, USA.

If desired, a registration system that optically detects logos or other graphics that repeat on each page can often be engineered. For more information, or to obtain the DocuSheeter print register mark specification, contact your Lasermix Roll Systems representative.

### Specifications:

For mark guidelines, please refer to the Lasermix Roll Systems Print Register Mark Specification document particular to your DocuSheeter model.
