

Convenient transfer and storage

StackRack™ moves fan-folded or cut-sheet stacks easily and conveniently to the next stop in the output handling sequence. Four standard and eight optional removable (along with four fixed base) shelves allow varying stack heights. When used with the Lasermix Roll Systems RST3AutoLoad™ tilt table, StackRack is one part of a complete output handling system.

The simple, inexpensive design and solid construction of heavy gauge, welded steel make the StackRack cost-effective and durable. The inward slanted shelves keep stacks square and flat for fewer inserter feeding jams, and the large storage capacity permits long inserter runs fed from the StackRack without having to splice or rethread paper.

Significant benefits of the StackRack include:

- Small footprint: occupies only 6.9 square feet (0.9 square meters)
- Versatile: can transport cut sheets and cartridge drives
- Aids in mailroom load leveling
- Large capacity: stores 40,000 16# (60 gsm) forms or more (when storing forms greater than 12" {305 mm} wide loaded from the RST3 AutoLoad table, only two quadrants are usable and capacity is 20,000 forms)

Specifications:

Height:	57 inches (145 cm)
Width:	44 inches (112 cm)
Length:	32 inches (81 cm)
Weight (empty):	175 lbs. (79 kg)
Shelf size:	12 x 18 inches (305 x 457 mm)
Capacity / section:	10,000 forms
Form width:	8 to 18 inches (203 to 457 mm)
Max. form depth:	12 inches (305 mm)
# of sections:	4 (16 with all shelves)
